Office Action Summary

Application No.

09/944,137

Applicant(s)

MATSUMOTO ET AL.

Examiner

LAM S NGUYEN

Art Unit

2853

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-7 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-7 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 04 September 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on ____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). ____
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 7 6) ☐ Other:

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-5, and 7 are rejected under 35 U.S.C. 102(b) as being obvious by Imanaka (EP 0920999).

Imanaka discloses a liquid discharge apparatus provided with:

a discharge port for discharging liquid (FIG. 1, element 5);

a liquid flow path (FIG. 1, element 7) communicating with said discharge port having a bubble generating region for generating bubble (FIG. 1: the region is above element 2);

a discharge energy generating element (FIG. 1, element 2) for generating thermal energy for generating the bubble in the liquid inside said bubble generating region; and

a liquid discharge head (FIG. 1, element 6) facing said discharge energy generating element spaced apart from said discharge energy generating element having a movable member in which an end portion at an upstream side in the flow direction of the liquid inside said liquid flow path is fixed and a down stream end thereof is a free end, in which ink is discharged from said liquid discharge head and a recording is performed by adhering said liquid on a medium to be recorded, wherein said liquid discharge apparatus comprises:

means for detecting an ink supply state inside said liquid flow path

(column 4, line 12-19: a detected temperature indicating the presence or absence of the ink); and

means for controlling or stopping the driving to said discharge energy generating element when a judgment is made that the ink is not normally supplied based on the detection result of the ink supply state inside said liquid flow path (column 4, line 12-19: based on a detected temperature detected indicating the presence or absence of the ink, the driving of the heat generating resistor can limited or stopped).

Referring to claim 2: wherein said means for detecting said ink supply state is temperature detection means for a temperature rise per unit hour inside the liquid flow path ((column 4, line 12-19: a detected temperature indicating the presence or absence of the ink)).

Referring to claim 3: further comprising driving signal supply means (Fig. 4) for supplying a driving signal for allowing the liquid to eject from said liquid discharge head.

Referring to claim 4: further comprising medium (FIG. 19, element 227) to be recorded conveyance means for conveying the medium to be recorded which receives the liquid discharged from said liquid discharge head.

Art Unit: 2853

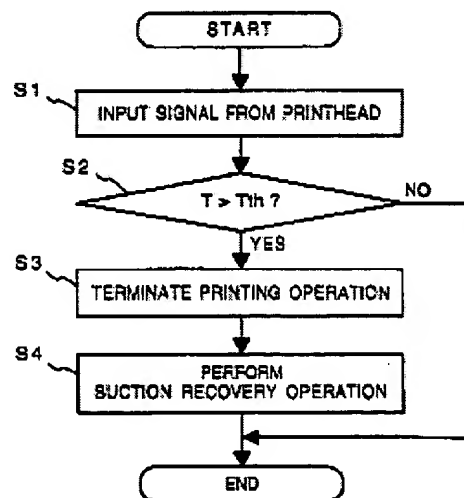

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Imanaka (EP 0920999) in view of Okada et al. (US 5886713).

Imanaka discloses the claimed invention applied as discussed above except wherein said temperature rise is more than a predetermined threshold value, a judgment is made that the ink is not in a state of being normally supplied and the driving to said heat generating element is controlled or stopped.

Okada et al. discloses that wherein said temperature rise is more than a predetermined threshold value, a judgment is made (FIG. 8) that the ink is not in a state of being normally supplied (column 5, line 10-14) and the driving to said heat generating element is controlled or stopped (FIG. 8).

Art Unit: 2853

Therefore, it would have been obvious for one having ordinary skill in the art at the time the invention was made to include a condition for terminating printing operation when the detected temperature indicating the state of the ink supply is greater than a threshold value as disclosed by Okada et al. into the liquid ejecting head of Imanaka. The reason of doing so is that it is possible to control printing so as to prevent the ink discharge failure without affecting speed of the printing operation of the printing apparatus as taught by Okada et al. (column 6, line 30-37).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LAM S NGUYEN whose telephone number is (703)305-3342.

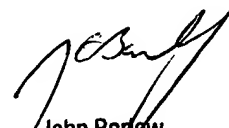

The examiner can normally be reached on 7:00AM - 3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, JOHN E BARLOW can be reached on (703)308-3126. The fax phone numbers for the organization where this application or proceeding is assigned are (703)305-3431 for regular communications and (703)305-3432 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)308-0956.
